

SUNBATHER: WHY CHOOSE US

THE COMPANY

- Sunbather is an Australian owned company with over 33 years of experience in the Solar Pool Heating industry. Sunbather introduced Strip Solar collector into Australia and have been leaders in the industry ever since.
- We have representation throughout Australia and New Zealand.
- As we are a true manufacturer with Australian owned operation, we ensure the highest quality from design to installation. No other company in Australia manufactures and installs their own product like Sunbather does!
- We are the exclusive manufacturer of the industries most proven solar collector, HiPec.
- We comply with Australian Standards AS 3634-1989 and AS 2369.2-1993, and have direct involvement in standard updates.
- Sunbather are also leaders in Commercial Solar Heating and Thermal Blanket projects.
- We are SPASA and SEIA members.
- We comply with OH&S standards.

THE PRODUCTS + SERVICE

- Sunbather is the exclusive manufacturer of the *unique* Flat Loop Technology (FLT) solar, eliminating big fat, ugly loops & unsightly panels on your clients roof. Other systems may have 'flat ends', but they are all an afterthought, either plugged on or glued in - making for a huge number of joins and potential for leaks. Ensure you request the **ONLY** true FLT ends from Sunbather.
- We have the largest range of coloured solar collectors, along with colour-coordinated pipes & fittings. Our pipe is coloured to suit your clients home, so we don't have to cut corners and paint as an afterthought. We don't believe in using unsightly white pipes as standard.
- *Unique* patented Kwik-Lok Manifolds & Retainers, made of Luran which is stronger than the standard PVC, ensure a 'Leak Free' connection at the point where the majority of other systems will let you down.
- Full control over systems using our new Opti Valve & System Anchor Fitting. Sunbather is the only system to have 100% control over water flow & pressure to ensure your clients are achieving the best from their solar systems.
- Only Sunbather uses Manifold Trays to support the manifolds and solar connections. And in conjunction with our new System Anchor Fitting, even in 20 years your clients pipes will be straight on the roof. Where as others will be twisting and buckling, no doubt causing leaks.
- One touch SunSwitch Solar Controller, with simple yet leading edge technology - allowing your clients to manage their pools temperature.
- *Unique* Punched Holes in the webbing ensure rainwater passes through and your clients roof remains free of moisture build up & will not blow off in high winds. Only Sunbather can deliver this benefit!
- Sunbather Silicone neutral curing roof adhesive to secure the collector, meaning an ultra strong bond and no acidic contamination to rainwater runoff in gutters and water tanks.
- Collector webbing is at the base of the tubes, not half way around. This allows full exposure to sunlight throughout the day. We have been testing this method for over 20 years and if there was a better way, we would be doing it!
- Our tubing size is perfect! Sunbather's testing over the past 20 years has proven that our solar tube size & spacing provides for the most energy to be extracted from the sun's heat. Bigger, fatter, more tubes, or even oval tubes don't work better - **that's fact!**
- **Sunbather's Customer Service is second to none!** We have fully trained technicians, who have been installing and servicing solar pool heating systems for many years. Our administration team is only a phone call away should you require any product information.
